

## PRODUCT DATA SHEET

Product ID            RGA12R  
Description:        11mm Kernmantle Rope

Accredited to:        EN 1891A:1998  
Material:             Polyamide outer sheath and  
                              twisted inner core  
Lengths:              10m, 20m & 30m (stocked)  
Weight:                75g/m  
Breaking strength:    32kN  
Max arrest force:    <6kN (when used with RGA device  
                              to EN353-2)  
Features:             High grade polyamide, twisted  
                              cores, extra light weight at high  
                              minimum breaking load, high-twist  
                              32-strand mantle braid > dirt  
                              resistance, good grip and high  
                              abrasion protection

Used in conjunction with RGA rope grab devices, the RGA12R provides vertical, or near vertical, fall protection. It is fitted with a single spliced eye with heat shrink cover.

This static rope is highly abrasion resistant, very low stretch, maximum strength, extremely durable and has a long service life. This rope is suitable for all kinds of rope access and work positioning. It can also be used for rescue work, guide work, expeditions and caving.
